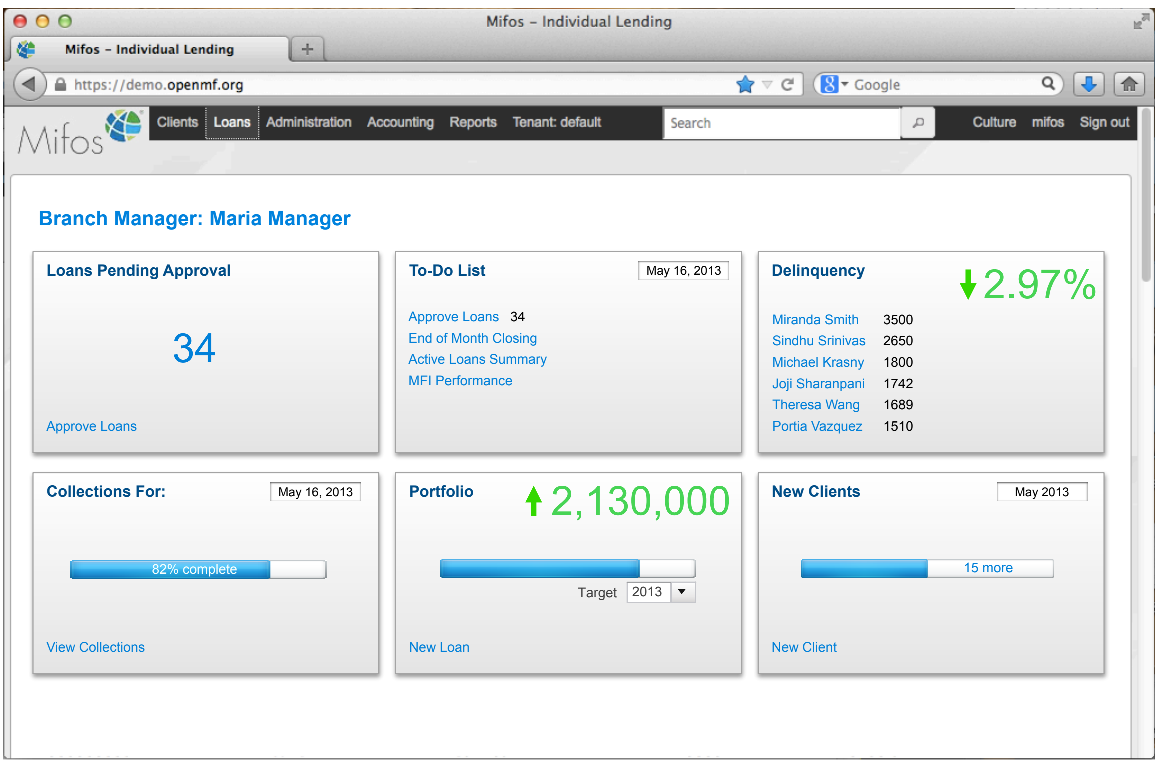
Hi-Fidelity Mockups – May 17, 2013

After seeing the new background on the Mifos X demo, I was inspired to play around a bit with some hi-fidelity mockups, just to get a feel what it could look like. I will probably enlist the help of some of my visual design colleagues to take a stab at "beautifying" the workflow designs (including the background – I'm not crazy about the black header region, pulling out the blues and greens from the logo would be better, I think.)

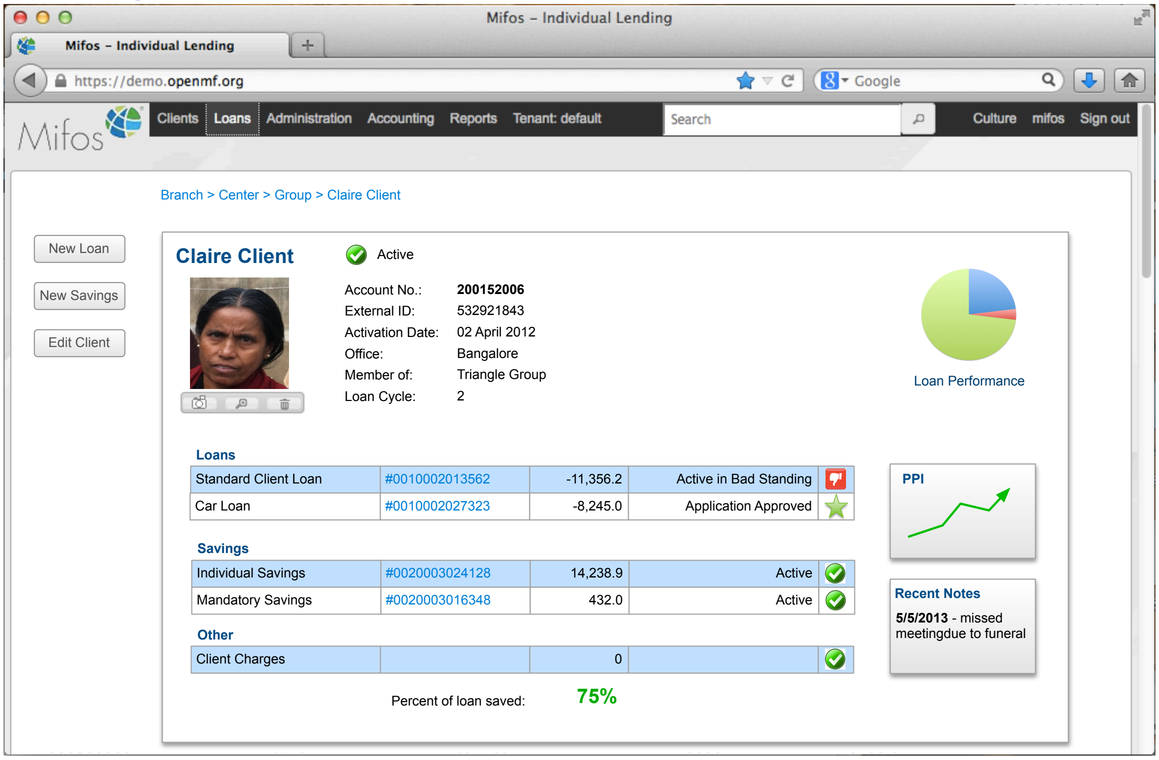
In any case, thought I share the ideas with you – basically I just took the existing background and added some realistic looking components for the client page and dashboard page.

Branch Manager Dashboard



Delinquency and portfolio numbers seemed to be important and we could include whether they are going up or down. Date fields would, of course, display the new calendar widget when clicked.

Client Page



Played a bit with some graphics here. The loan performance graph, I'm thinking, would aggregate all loans together. Green shows how much has already been paid, red is how much is currently due and blue is how much is yet to be paid. Probably want tooltips that appear showing actual numbers when you hover over the regions.

PPI index – several people requested this information on the main client page. Perhaps this needs some numbers, but I thought a graph showing the trend over time would be good.

Also added the percent of loan saved as this seems to be an important number to several organizations. This number must be over 20% for most MFIs to lend to this client, so I added it to the page.

Not sure how best to display the loan, savings, and other data, could be all together in a single table, but I think the amounts and status in columns makes it easier to read.
